

**Make sure your food looks its best!**

**I**nternational Patterns, Inc. has developed a new light box with the trade name "The Edge". It not only describes the lighting concept but also the competitive advantage it gives the end user.

"The Edge" is illuminated with LED's. These are called "chips" since they are in fact solid state devices which give off light instead of heat and light as do traditional lighting sources. Because of this attribute "The Edge" is meeting the need for desirable and necessary GREEN Technology.

## FEATURES

- ✓ The box uses 1/5, (20%) of the electricity of a back lit box.
- ✓ There is no harmful Mercury used in LED bulbs as opposed to fluorescent bulbs which do contain mercury.
- ✓ Last for 50,000 plus hours as opposed to 2000+ hours for fluorescent.
- ✓ Give off no harmful image destroying UV rays unlike fluorescent which do emit UV.
- ✓ LED run cooler than fluorescent.
- ✓ Entire light box is 95% recyclable.
- ✓ Less than 1" thick.
- ✓ Your images will be more colorful and brighter than with IPI LED lighting.
